Education

Master in Informatics and Computing Engineering
Faculty of Engineering of the University of
Porto (2011-)
Current GPE 13 out of 20

Relevant work

Facebook STOP Scrapper (in development)

STOP Scrapper is a website that shows information about roadblocks (Operações STOP in Portuguese) the police shares on a monthly basis on their Facebook page. There is a Python script using GraphAPI to fetch the data, parse it, and store it in a MySQL database. Then, the roadblocks are shown in realtime in the website, as well as statistics about the most frequent places where roadblocks happen. After launching the website, a mobile app is to be released, through which the user receives notifications about roadblocks near them.

Relevant Features

Hard worker
Fast learner
Good social skills, communicative person

Extracurricular activities

President of the General Assembly of the Students
Association of Computer Graphics @ FEUP
(2016-present)

Teacher Assistant @ Projeto FEUP
(Fall semester 2015)
(Fall semester 2016)

Monitor @ Universidade Júnior – UP
3D Modelling for 7th-8th graders
(June 2016 – July 2016)

Prizes

HeartBits Hackathon 2016
Honorable Mention – GestaMed
